

NEW BREMBO BRAKE CALIPER REPAIR KITS

To guarantee professional-standard maintenance, Brembo recently supplemented its Aftermarket product range with 300 new brake caliper repair kits.

This important component of the braking system in fact features some internal parts which can wear and deteriorate with time. This is due to normal sliding friction, which due to the weather and to the presence of salt and chemical agents on the roads may lead to the corrosion of the rubber and metallic parts of the calipers.

Now these components can be replaced with new, Brembo quality components, to ensure the brake calipers continue to work in total safety and to ensure maximum performance levels for the braking system.

As of today, spare parts professionals can choose between 5 different families of Brembo kits, comprising caliper components most subject to wear and deterioration, such as the sliding guide pins on floating calipers, the dust covers, the piston seals and the pistons themselves.

A complete set of new components for rapid, safe and professional repairs, is available for purchase from November onwards.

Stezzano, October 2019
